

**NOTICE OF AVAILABILITY OF ADMINISTRATIVE RECORD FILE FOR THE DEFENSE REUTILIZATION AND MARKETING OFFICE (DRMO) MANANA STORAGE AREA, HAWAII, INSTALLATION RESTORATION PROGRAM.** The Fleet and Industrial Supply Center, Pearl Harbor announces the availability for public review of the administrative record file for the DRMO Manana Storage Area under the Installation Restoration Program. The Site Inspection phase of the IR program confirmed the presence of elevated levels of metals (arsenic, lead, beryllium, antimony, chromium, and thallium). Beryllium, antimony, chromium and thallium levels may be typical of naturally occurring levels found in volcanic soils. A rigorous statistical evaluation of background metals concentration will be performed as part of a Remedial Investigation/Feasibility Study (RI/FS). The RI/FS will characterize the extent of elevated levels of metals and recommend an appropriate remedial action. The administrative record file includes documentation of environmental studies conducted and will be continually updated to include subsequent planned remedial actions. The administrative record file is located at the Pacific Division, Naval Facilities Engineering Command. Agencies and the general public are encouraged to provide written comments which should be mailed to the address below no later than 30 days after the publication date. Contact: Public Affairs Officer, Commander, Naval Base, Attn: Code NOOPA, Box 110, Pearl Harbor, HI 96860-5020. Telephone: (808) 471-0281.
